

ACTIVESIGNATURE

ACTIVESIGNATURE PRODUCT FEATURES

Technical features	ACTIVESIGNATURE
All signature templates are created and administered from the ACTIVESIGNATURE administration tool	•
Supports Microsoft Outlook Web Access	•
ACTIVESIGNATURE identifies the senders e-mail format and inserts a signature in the correct format when replying or forwarding (HTML, Plain text or rich text)	•
Different signature templates for new e-mails, as for replies and forwards	•
When using the AD UPDATE module the employees can edit selected fields in their e-mail signature. Changes are saved either locally on the employee's Microsoft outlook mailbox or globally in Microsoft Active Directory or in another data source	•
ACTIVESIGNATURE can overwrite the employees' own e-mail signatures	•
In the ACTIVESIGNATURE administration tool the Administrator can state whether the signature templates always should be inserted, never should be inserted or if it is the users decision	•
Insert fields from Microsoft Active Directory or another data source	•
User defined fields	•
The signatures will also work when the user is not logged on the network	•
Multiple domain Support	•
Supports Microsoft Exchange 5.5 or later	•
Supports SQL Server support	•
Supports Microsoft Outlook 2000, XP or Outlook 2007	•
Supports Citrix Server	•
Supports Terminal Server	•
Database driven signatures	•
Client based and does not need any software installation on the Microsoft Exchange server	•
